

# **ABSTRACT**

5       A high-performance liquid magnetizer, comprised of powerful  
magnet and fluid sink; a spiral fluid guide being disposed in  
the fluid sink; a first opening disposed at the center and a  
second opening one side of the fluid guide; the liquid flowing  
through the first opening into the fluid guide towards the second  
10   opening; the spiral sink extending the magnetization time for  
the fluid while the revolving direction of the liquid help  
improve the magnetism field effects.
